Portfolio: natalisalazar.com.ar

SUMMARY

Senior Product Designer with extensive experience in digital banking, authenticated experiences, and enterprise products. I look beyond individual interfaces to understand how customer needs, business constraints, and complex systems connect.

Working closely with engineers, stakeholders, and customer research has shaped my approach: question assumptions, understand the broader context, and know when to zoom out or focus on the details. **I've learned to be skeptical of unnecessary complexity. I still find people more interesting than frameworks.**

EXPERIENCE

Career break — Primary Caregiver *Nov 2022 – 2025*

UX Designer — Fresenius Medical Care *Remote | 2016 – 2021*

Worked with engineering leaders and executives to improve internal tools supporting operational processes across a global healthcare organization.

- Worked directly with the CTO to scope and design new features, including a social layer embedded into the internal ticket system — a company-wide feed built into the ops tool to improve internal communication.
- Designed adaptive display layouts for medical center screens that had to work across different resolutions and mounting contexts — a physical environment constraint, not a screen design problem.
- Built a visual design system establishing brand consistency across the product — a second instance of building shared design infrastructure from scratch, this time in a regulated healthcare environment.

Web Designer to UX Designer — Galicia Bank *Buenos Aires, Argentina | 2011 – 2020*

Spent nearly a decade designing products for retail and business banking customers at one of Argentina's largest financial institutions — working under strict regulatory constraints, at scale, with real consequences for every decision.

- Designed online banking experiences used by millions of individuals and businesses, including complex workflows: payroll, bulk transfers, permissions, and role-based account access.
- Learned early that users rarely behave the way teams expect — used Hotjar and Google Analytics to measure landing page performance across campaigns, redesigning hierarchy and CTAs based on what people actually did. Each campaign fed insights into the next.
- Started building reusable components and patterns before "design systems" had a name — initially because developers needed to build screens faster. What began as a practical toolset evolved into a shared system that standardized how the product was built across teams.
- Working closely with marketing taught me that understanding what motivates people often matters more than optimizing screens.
- Experienced the shift to Agile firsthand and learned that working methods shape product outcomes as much as design decisions — which changed how I think about team structure and process ever since.

UX Designer — Freelance *(concurrent with Galicia Bank) | Remote | 2014 – 2020*

Worked independently with clients in e-commerce and hospitality — often as the only designer on the project. Running discovery, research, and delivery without a team forced faster decisions and tighter scope.

- Worked directly with founders and business owners where conversations were as much about business viability as design decisions — a different kind of problem-solving than working inside a large organization.
- Applied methods like Design Sprints to compress discovery and move clients toward testable ideas quickly.
- Balanced speed with enough validation to avoid solving the wrong problem.

PROJECTS

Airport Dining Experience — Service Design Exploration *Remote | Nov 2024 – Jan 2025*

Volunteer project with an international team of four designers. Led the discovery and design process — research synthesis, personas, journey maps, and service blueprints — for a 0→1 airport dining concept. The project didn't ship, but produced a clear opportunity map and design framework grounded in real operational constraints.

SKILLS

Practice: Product Design, Service Design, Design Systems, User Research, Information Architecture, Prototyping, Workshop Facilitation.

Tools: Figma, Maze, Miro.

Technical foundations: HTML, CSS (extensive, 12+ years)

EDUCATION

- **Bachelor's Degree in Graphic Design** — University of Buenos Aires (UBA), 2008
- **Specialisation in Technique and Logic of Form** — University of Buenos Aires (UBA), 2010

CERTIFICATIONS

Took both during my career break to deepen the systems and holistic thinking I'd built through practice.

- **Human-Centered Service Design** — IDEO U, 2023
- **Product Management Immersion** — CareerFoundry, 2024
